Toyota HiLux (NG) Aluminium Tray Features
Aluminium Tray Features

ALUMINUM BODY WITH GALVANISED HARDWARE & ZINC PLATED HARDWARE

• The aluminium tray body range utilises fully galvanised sheet steel and zinc plated hardware. Combined with aluminium working surfaces this provides the tray body with excellent corrosion protection throughout.

ROPE RAILS

• Quick hitch design makes restraining loads simpler, as the rope is only required to be fed through the rail once, and then hitched off to the end of the rail.
Aluminium Tray Features

HIGH IMPACT MOULDED GUARDS
• Manufactured from an automotive grade rubber modified polypropylene. This material has excellent memory characteristics so when it is deformed it will generally return to its moulded shape.
• High impact strength at sub-zero temperatures while maintaining excellent rigidity at ambient temperatures. Stabilised to meet automotive exterior weathering requirements.
• Designed with smooth radii and no external sharp edges for increased safety.
• No corrosion from stone chipping.

DROPSIDE & TAILGATE CATCHES
• Manufactured from an automotive grade glass-reinforced nylon which meets exterior weathering requirements.
• Designed with smooth radii and no external sharp edges for improved safety.
• Easy operation due to low coefficient of friction between operating surfaces.
• Dropside & tailgate catch have an over moulded steel insert for increased strength & durability. (Shown Inset)
• Updated stainless steel spring provides easy adjustment and an increased “spring” feel during latch operation.
Aluminium Tray Features

“QUICK LOCK” DROPSIDE & TAILGATE HINGES

- Innovative functionality provides simple fitment and removal.
- Removal process:
  1. Lower dropside to the horizontal position.
  2. Apply inward pressure to disengage pin from seat.
  3. Raise dropside upwards to remove from the tray body.

Fitment process:
  1. Place the dropside hinge into the hinge seat.
  2. Raise or lower the dropside to automatically engage the hinge with the seat.

INTERNAL LOAD RESTRAINT POINTS

- Internal load restraint points allow loads that are lower than the dropsides to be restrained effectively.
- Ropes or straps no longer need to pass over the dropsides when restraining loads. This allows maximum down force to be applied to the load.
